

Pfizer CentreSource

FACT SHEET:
PCS Product and Service Capabilities

Fine Chemicals and APIs:

With more than 40 years of steroid expertise, Pfizer CentreSource (PCS) is a world leader in fully integrated steroid manufacturing, providing a broad range of cortico and hormonal steroids that rely on Pfizer's long-standing, proprietary expertise in early-stage bioconversion operations. PCS supplies a variety of high quality and high value APIs and intermediates derived from the company's broad array of chemical synthesis and bioprocessing capabilities. The company also offers one of the industry's largest-scale GMP fermentation capabilities. Equipped with state-of-the-art infrastructure and staffed by fermentation experts, Pfizer's Kalamazoo, Michigan, facility also functions as Pfizer's "Center of Excellence in Fermentation."

Contract Manufacturing:

Pfizer is known for the innovation, quality, and diversity of its products. PCS contract manufacturing capabilities draw upon a global network of Pfizer facilities, technologies and expertise to fulfill customers' finished product requirements, regardless of the dosage form, batch size or the complexity of the process. PCS contract manufacturing provides cost effective and high quality solutions for diverse product types including sterile solutions and suspensions, freeze-dried products, sterile filling of potent and cytotoxic solutions, glass and plastic ampoules, blow/fill/seal, and pre-filled syringes, among others. The company provides comprehensive, expert support for: technology transfer and scale-up; raw materials certification; quality control; and technical/regulatory support. Services are available for both commercial-scale and smaller-scale.
